L12 ANSWER 10 OF 104 BIOTECHDS COPYRIGHT 2005 THE THOMSON CORP. on STN

ACCESSION NUMBER: 2004-16759 BIOTECHDS

TITLE: Screening potential therapeutic compounds for cardiac therapeutic preparations, useful for treating heart failure in a subject, comprises contacting a sample of cell or tissue with a compound and detecting gene **expression** level

for use in cardiovascular disorder gene therapy

AUTHOR: BEDNARIK D P

PATENT ASSIGNEE: ARTESIAN THERAPEUTICS INC

PATENT INFO: WO 2004050894 17 Jun 2004

APPLICATION INFO: WO 2003-US37927 26 Nov 2003

PRIORITY INFO: US 2002-437102 31 Dec 2002; US 2002-429379 27 Nov 2002

DOCUMENT TYPE: Patent

L12 ANSWER 11 OF 104 BIOTECHDS COPYRIGHT 2005 THE THOMSON CORP. on STN

ACCESSION NUMBER: 2004-10657 BIOTECHDS

TITLE: Detecting a cancer cell in a subject sample, also related to cancer treatments, comprises determining the level of nucleic acid that is linked to map position 8q22.3 of the **human** genome or its **expression** product; protein level determination and antisense sequence for use

in disease therapy and gene therapy
AUTHOR: WATTS C; SAUNDERS D; HENDERSON M; CLANCY J; HENSHALL S;
SUTHERLAND R; O'BRIEN P
PATENT ASSIGNEE: GARVAN INST MEDICAL RES
PATENT INFO: WO 2004022750 18 Mar 2004
APPLICATION INFO: WO 2003-AU1164 5 Sep 2003

L12 ANSWER 12 OF 104 BIOTECHDS COPYRIGHT 2005 THE THOMSON CORP. on STN

ACCESSION NUMBER: 2004-08465 BIOTECHDS

TITLE: Use of inhibitors of the **expressed** proteins or mRNA
transcripts of TCF target genes whose **expression** is
regulated by TCF/beta-catenin complexes, for preparing
compositions treating cancers, e.g. colorectal cancer;
involving vector-mediated gene transfer and
expression in host cell for use in diagnosis and
gene targeting

AUTHOR: CLEVERS J C; GOMEZ E B; VAN DE WETERING M L; SUILS E S
PATENT ASSIGNEE: KYLIX BV
PATENT INFO: US 2004005313 8 Jan 2004
APPLICATION INFO: US 2002-197619 16 Jul 2002

L12 ANSWER 13 OF 104 BIOTECHDS COPYRIGHT 2005 THE THOMSON CORP. on STN

ACCESSION NUMBER: 2004-12491 BIOTECHDS

TITLE: Diagnosing lung cancer by contacting sample comprising lung
cells from subject with probe that hybridizes to nucleic acid
having **human** bromo domain testis specific gene
product cDNA sequence and determining hybridization;
DNA probe and vector **expression** in host cell for
use in disease diagnosis

AUTHOR: SCANLAN M J; GURE A; OLD L J; CHEN Y; WILLIAMSON B

AB The invention provides protein and cDNA and genomic sequences for a new
human serine/threonine protein **kinase**

sequence homolog. In addition, its functional domains and protein motifs are analyzed based on sequence homol. anal. Exptl. data of tissue **expression** indicates its **expression** in brain (including medulla, anaplastic oligodendroglioma, glioblastoma, and fetal brain), eye (retinoblastoma), liver (adenocarcinoma), germ cell tumors, epid tumor, and lung (small cell **carcinoma**). The gene is located on chromosome 11. SNPs, including insertion and deletion variants are identified.

AB The invention provides protein and cDNA and genomic sequences for a new **human protein serine/threonine kinase** (phosphorylating) sequence homolog. Exptl. data indicates protein **serine/threonine kinase** (phosphorylating) sequence homolog gene **expression** in lung squamous cell **carcinoma** and large cell **carcinoma**, kidney, B-cell chronic lymphatic leukemia, kidney tumors, breast, ovary fibrotheoma, brain anaplastic oligodendroglioma, head, stomach, testis embryonal **carcinoma**, and **lymphoma**. In addition, its functional domains and protein motifs are analyzed based on sequence homol. anal. The protein **serine/threonine kinase** (phosphorylating) gene is located on chromosome X. SNPs, including insertion and deletion variants are identified at 57 different nucleotide positions.

AB The invention provides protein, cDNA and genomic sequences for a novel **human protein kinase** related to **serine/threonine kinase**. Specifically, a virtual northern blot shows **serine/threonine kinase** gene **expression** in brain (neuroblastoma), lung (small cell **carcinoma**), muscle (**rhabdomyosarcoma**), lymph (Burkitt **lymphoma**), ovary tumor, placenta (normal and choriocarcinoma), colon (normal, adenocarcinoma, and colon tumor), kidney (renal cell adenocarcinoma), breast, cervix (**carcinoma**), uterus tumor, pancreas (pancreatic islet), a pooled colon/kidney/stomach sample, and a pooled pancreas/spleen sample. Twenty eight single nucleotide polymorphism has been found on **serine/threonine kinase** gene that has been mapped to chromosome 11. The invention also relates to screening modulator of **serine/threonine kinase** and their uses in therapy. The invention further relates to methods, vector and hosts for **expression** of **serine/threonine kinase**.

AB DERWENT ABSTRACT:

NOVELTY - An isolated human **kinase** peptide (I) that is related
 to **serine/threonine kinase** subfamily,
 consisting or comprising a fully defined sequence of 318 amino acids (S2)
 as given in the specification, or its fragment comprising 10 contiguous
 amino acids, or an amino acid sequence of an allelic variant or ortholog
 of the amino acid sequence of (S2), is new.

DETAILED DESCRIPTION - An isolated human **kinase** peptide
 (I) that is related to **serine/threonine**
kinase subfamily, consisting or comprising: (a) a fully defined
 sequence of 318 amino acids (S2) as given in the specification, or its
 fragment comprising 10 contiguous amino acids; (b) an amino acid sequence
 of an allelic variant or ortholog of the amino acid sequence of (S2),
 where the allelic variant or ortholog is encoded by a nucleic acid
 molecule that hybridizes under stringent conditions to the opposite
 strand of a nucleic acid molecule having a fully defined sequence of 957
 (S1) (a cDNA molecule) or 105413 (genomic sequence) nucleotides (S3) as
 given in the specification; or (c) a fragment of an amino acid sequence
 of (S2), comprising 10 contiguous amino acids. The isolated human
kinase peptide variant has an amino acid sequence that shares 70%

homology with (S2). INDEPENDENT CLAIMS are also included for the following: (1) an isolated **antibody** (II) that selectively binds to (I) comprising the amino acid sequence of (S2), its allelic variant or ortholog, or fragment; (2) an isolated nucleic acid molecule (III) consisting or comprising of a nucleotide sequence that encodes (I) or a nucleotide sequence that is complement of the nucleotide sequence encoding (I), where allelic variant of (III) encoding a human **kinase** peptide shares at least 80% homology with (S1) or (S3); (3) a gene chip comprising (III) that comprises a nucleotide sequence encoding (I), or its complement; (4) a transgenic non-human animal comprising (III) that comprises a nucleotide sequence encoding (I), or its complement; (5) a nucleic acid vector (IV) comprising (III) that comprises a nucleotide sequence encoding (I), or its complement; (6) a host cell comprising (IV); (7) preparation of (I); (8) detecting the presence of (I) in a sample involves contacting the sample with a detection agent that specifically allows detection of the presence of the peptide in the sample; (9) detecting the presence of (III) in a sample involves contacting the sample with an oligonucleotide that hybridizes to the nucleic acid molecule under stringent conditions and determining whether an oligonucleotide binds to the nucleic acid molecule in the sample; and (10) a pharmaceutical composition (V) comprising an agent that binds to (I), and identified using (I) (comprising a sequence of (S2), its allelic variant or ortholog or fragment), and a carrier; and (11) a method for identifying a modulator of a human **kinase** peptide, comprising administering the agent to a host cell comprising an **expression** vector that **expresses** the peptide, optionally involves contacting a cell **expressing** the peptide with an agent, and determining if the agent has modulated the **expression** of the peptide.

WIDER DISCLOSURE - The following are disclosed: (1) chimeric or fusion proteins comprising (I); (2) agents identified using screening methods involving (I); (3) non-coding fragments of a nucleic acid molecule having a sequence of (S1) or (S3); (4) kit comprising (II) for detecting (I) comprising an amino acid sequence of (S2), its allelic variant or ortholog or fragment; (5) kits for detecting the presence of nucleic acid encoding **kinase** peptide in a biological sample; (6) analogs or derivatives of (I); and (7) compartmentalized kits comprising necessary reagents for carrying out the above mentioned assays.

BIOTECHNOLOGY - Preparation: (I) is prepared by standard **recombinant** techniques (claimed). Preferred Molecules: The allelic variants of (I) and (III) preferably share 90% homology with (S2), and (S1) or (S3), respectively.

ACTIVITY - None given.

MECHANISM OF ACTION - Gene therapy; (I) **expression** or activity modulator. No supporting biological data is given.

USE - (I) comprising an amino acid sequence of (S2), its allelic variant or ortholog or fragment, is useful for identifying a modulator of a human **kinase** peptide. (I) comprising an amino acid sequence of (S2), its allelic variant or ortholog or fragment is also useful for identifying an agent that binds to it. (V) is useful for treating a disease or condition mediated by human **kinase** peptide (all claimed). (I) and (III) can be used as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic agents that modulate **kinase** activity in cells and tissue that **express** the **kinase**. (I) and (III) can be used as a query sequence to perform a search against sequence databases to, identify other family members or related sequences. (I) is used to raise **antibodies** or to elicit another immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, and as markers for tissues in which the corresponding protein is preferentially **expressed**. (II) is useful for isolating (I), purifying (I), and to assess **expression** of (I) in active stages of a disease, or in an individual with a predisposition towards disease related to the protein's function. The **antibodies** are also useful for assessing normal and aberrant subcellular localization of cells in various tissues in an organism, in

pharmacogenomic analysis, for tissue typing and for inhibiting protein function. (III) is useful as probes, primers, chemical intermediates and in biological assays. The nucleic acid molecules are useful for constructing **recombinant** vectors, host cells and transgenic animals, and for designing ribozymes. The nucleic acids are also useful in drug screening assays and as a target for treatment by the compounds identified through drug screening. The nucleic acid molecules are also useful for monitoring effectiveness of modulating compounds on the **expression** or activity of **kinase** gene in clinical trials or in treatment regimen, and for testing an individual for a genotype that while not necessarily causing the disease nevertheless affects the treatment modality. The nucleic acid molecules are also useful in diagnostic assays for qualitative changes in **expression** of nucleic acid encoding **kinase** and particularly in qualitative changes that lead to pathology. The nucleic acid molecules can be used to detect mutations in genes encoding **kinases** and gene **expression** products such as mRNA. Detection of mutated form of gene encoding **kinase** associated with a dysfunction provides a diagnostic tool for a active disease or susceptibility to disease which results from overexpression, underexpression or altered **expression** of **kinase** protein. (III) also provides vectors for gene therapy in patients with aberrant **expression** of gene encoding **kinase**.

EXAMPLE - None given. (128 pages)

AB The invention provides protein and cDNA and genomic sequences for a new human **serine/threonine** protein **kinase** sequence homolog. In addition, its functional domains and protein motifs are analyzed based on sequence homol. anal. Exptl. data of tissue **expression** indicates its **expression** in brain (including

medulla, anaplastic oligodendroglioma, glioblastoma, and fetal brain), eye (retinoblastoma), liver (adenocarcinoma), germ cell tumors, epid tumor, and lung (small cell carcinoma). The gene is located on chromosome 11. SNPs, including insertion and deletion variants are identified.

OTHER SOURCE: WPI: 2002-599781 [64]

AB DERWENT ABSTRACT:

NOVELTY - Isolated peptide (I) comprising: (a) a fully defined sequence of 369 amino acids (P1), given in the specification; (b) an allelic variant or ortholog of (P1) encoded by a nucleic acid molecule that hybridizes under stringent conditions to the opposite strand of the nucleic acid molecule comprising a fully defined sequence of 1864 (S1) or 25603 (S2) bp, given in the specification; or (c) a fragment of (P1) comprising at least 10 contiguous amino acids, is new.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for: (1) an isolated **antibody** that selectively binds to (I); (2) an isolated nucleic acid molecule (II) comprising a sequence encoding (I), or its complement; (3) a gene chip comprising (II); (4) a transgenic non-human animal comprising (II); (5) a nucleic acid vector comprising (II); (6) a host cell containing the vector; (7) producing (I), comprising: (a) introducing a nucleotide sequence encoding the amino acid sequence of (I) into a host cell; and (b) culturing the host cell under conditions suitable for the **expression** of the peptide from the nucleotide sequence; (8) detecting the presence of (I) in a sample, comprising contacting the sample with a detection agent that specifically allows detection of the presence of the peptide in the sample then detecting the presence of the peptide; (9) detecting the presence of (II) in a sample, comprising: (a) contacting the sample with an oligonucleotide that hybridizes to (II) under stringent conditions; and (b) determining whether the oligonucleotide binds to (II) in the sample; (10) identifying a modulator of (I) or its **expression**, comprising contacting (I) or a cell **expressing** (I) with an agent and determining if the agent modulated the function or activity, or **expression** of the peptide; (11) identifying an agent that binds to (I), comprising contacting the peptide with an agent and assaying the contacted mixture to determine whether a complex is formed with the agent bound to the peptide; (12) a pharmaceutical composition comprising the agent and a carrier; (13) treating a disease or condition mediated by human **kinase** protein, comprising administering to a patient the agent; (14) an isolated human **kinase** peptide comprising a sequence that is at least 70% identical to a (P1); (15) an isolated nucleic acid molecule encoding a human **kinase** peptide, which is at least 80% identical to (S1) or (S2).

BIOTECHNOLOGY - Preferred Method: Identifying a modulator of (I) comprises administration of the agent to a host cell containing the vector that **expresses** (I). Preferred Peptide: The human **kinase** peptide is preferably 90% identical to (P1). Preferred Nucleic Acid: The nucleic acid molecule in (15) is preferably 90% identical to (S1) or (S2).

ACTIVITY - Cytostatic. No suitable data given.

MECHANISM OF ACTION - Protein **kinase**; Gene therapy.

USE - (I) are useful in substantial and specific assays related to functional information of the peptide sequences, to raise **antibodies** or to elicit immune response, as reagents in assays to determine the levels of protein in biological fluids, and as markers for tissues where the corresponding protein is **expressed**. The peptides and **antibodies** are useful in drug screening assays, tissue typing and pharmacogenomic analysis. They are also useful in treating disorders associated with the absence of, inappropriate, or unwanted **expression** of **kinase** protein in prostate, lungs or brain. The nucleic acid molecules are useful for probes, primers and chemical intermediates in biological assays, for constructing **recombinant** vectors, **expressing** antigenic portions of the protein. The peptide and nucleic acid sequences are useful as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic agents that modulate **kinase** activity in cells and tissues that **express** the **kinase**. The host cells are useful in producing a **kinase** protein or peptide, and non-human transgenic animals.

EXAMPLE - No suitable example given. (86 pages)

OTHER SOURCE: WPI: 2002-304251 [34]

AB DERWENT ABSTRACT:

NOVELTY - An isolated human **kinase** protein (I) that is related to **serine/threonine kinase** subfamily, consisting of or comprising a fully defined 328 (S2) or 135 (S5) amino acid sequence given in the specification, or its fragment comprising 10 contiguous amino acids, or an amino acid sequence of an allelic variant or ortholog of the amino acid sequence of (S2) or (S5), is new.

DETAILED DESCRIPTION - (I) consists or comprises of: an amino acid sequence of (S2) or (S5); an amino acid sequence of an allelic variant or an ortholog of (S2) or (S5), where the allelic variant or ortholog is encoded by a nucleic acid molecule that hybridizes under stringent conditions to the opposite strand of a nucleic acid molecule having a fully defined 990 (S1) or 408 nucleotide (S3) sequence given in the specification; a fragment of an amino acid sequence of (S2) or (S5), comprising 10 contiguous amino acids. The isolated human **kinase** variant has an amino acid sequence that shares 70% homology with (S2) or (S5). INDEPENDENT CLAIMS are also included for the following: (1) an isolated **antibody** (II) that selectively binds to (I) comprising the amino acid sequence of (S2) or (S5), its allelic variant or ortholog, or fragment; (2) an isolated nucleic acid molecule (III) consisting or comprising of a nucleotide sequence that encodes (I) or a nucleotide sequence that is a complement of the nucleotide sequence encoding (I), where the allelic variant of (III) encoding a human **kinase** peptide shares at least 80% homology with (S1) or (S3); (3) a gene chip comprising (III) that comprises a nucleotide sequence encoding (I), or its complement; (4) a transgenic non-human animal comprising (III) that

comprises a nucleotide sequence encoding (I), or its complement; (5) a nucleic acid vector (IV) comprising (III) that comprises a nucleotide sequence encoding (I), or its complement; (6) a host cell comprising (IV); (7) preparation of (I); (8) detecting the presence of (I) in a sample involves contacting the sample with a detection agent that specifically allows detection of the presence of the peptide in the sample; (9) detecting the presence of (III) in a sample involves contacting the sample with an oligonucleotide that hybridizes to the nucleic acid molecule under stringent conditions and determining whether an oligonucleotide binds to the nucleic acid molecule in the sample; and (10) a pharmaceutical composition (V) comprising an agent that binds to (I), and was identified using (I) (comprising a sequence of (S2) or (S5), its allelic variant or ortholog or fragment), and a carrier.

WIDER DISCLOSURE - Disclosed are: (a) chimeric or fusion proteins comprising (I); (b) agents identified using screening methods involving (I); (c) non-coding fragments of a nucleic acid molecule having a sequence of (S1) or (S3); (d) a kit comprising (II) for detecting (I) comprising an amino acid sequence of (S2) or (S5), its allelic variant or ortholog or fragment; (e) kits for detecting the presence of **kinase** nucleic acid in a biological sample; (f) analogs or derivatives of (I); and (g) compartmentalized kits comprising necessary reagents for carrying out the above mentioned assays.

BIOTECHNOLOGY - Preparation: (I) is prepared by standard **recombinant** techniques (claimed). Preferred Molecules: The allelic variants of (I) and (III) preferably share 90% homology with (S2) or (S5), and (S1) or (S3), respectively.

ACTIVITY - None given.

MECHANISM OF ACTION - Gene therapy; (I) **expression** or activity modulator. No suitable data given.

USE - (I) comprising an amino acid sequence of (S2) or (S5), its allelic variant or ortholog or fragment, is useful for identifying a modulator of a human **kinase** protein; preferably, the agent is administered to a host cell comprising an **expression** vector that **expresses** the peptide. The method optionally involves contacting a cell **expressing** the peptide with an agent and determining if the agent has modulated the **expression** of the peptide. (I) comprising an amino acid sequence of (S2) or (S5), its allelic variant or ortholog or fragment is also useful for identifying an agent that binds to it. (V) is useful for treating a disease or condition mediated by human **kinase** protein (all claimed). (I) and (III) can be used as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic agents that modulate **kinase** activity in cells and tissue that **express** the **kinase**. (I) and (III) can be used as a query sequence to perform a search against sequence databases to, identify other family members or related sequences. (I) is used to raise **antibodies** or to elicit another immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, and as markers for tissues in which the corresponding protein is preferentially **expressed**. The **kinases** isolated from humans and their human/mammalian orthologs serve as targets for identifying agents for use in mammalian therapeutic applications, and biological assays related to **kinases** that are related to members of the **serine/threonine kinase** subfamily. The proteins can also be used in screening assays to screen a compound for its ability to stimulate or inhibit interaction between **kinase** protein and a molecule that normally interacts with the **kinase** protein. The proteins also provide a target for diagnosing a disease or predisposition to disease mediated by the peptide, and in pharmacogenomic analysis. The peptides are also useful for treating a disorder characterized by absence of, inappropriate or unwanted **expression** of the protein. (II) is useful for isolating (I), purifying (I), and to assess **expression** of (I) in active stages of a disease, or in an individual with a predisposition towards disease related to the protein's function. The **antibodies** are also useful for assessing normal and aberrant subcellular localization of cells in various tissues in an organism, in pharmacogenomic analysis, for

tissue typing and for inhibiting protein function. (III) is useful as probes, primers, chemical intermediates and in biological assays. The nucleic acid molecules are useful for constructing **recombinant** vectors, host cells and transgenic animals, and for designing ribozymes. The nucleic acids are also useful in drug screening assays and as a target for treatment by the compounds identified through drug screening. The nucleic acid molecules are also useful for monitoring effectiveness of modulating compounds on the **expression** or activity of the **kinase** gene in clinical trials or in a treatment regimen, and for testing an individual for a genotype that while not necessarily causing the disease nevertheless affects the treatment modality. The nucleic acid molecules are also useful in diagnostic assays for qualitative changes in **kinase** nucleic acid **expression** and particularly in qualitative changes that lead to pathology. The nucleic acid molecules can be used to detect mutations in **kinase** genes and gene **expression** products such as mRNA. Detection of a mutated form of the **kinase** gene associated with a dysfunction provides a diagnostic tool for active disease or susceptibility to disease which results from overexpression, underexpression or altered **expression** of the **kinase** protein. (III) also provides vectors for gene therapy in patients with aberrant **kinase** gene **expression**.

ADMINISTRATION - No details given.

EXAMPLE - None given. (65 pages)

AB DERWENT ABSTRACT:

NOVELTY - An isolated LIM domain **kinase** (LIMK) polypeptide (I) having a fully defined sequence of 255 amino acids as given in specification, is new.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a composition comprising (I) and a carrier.

BIOTECHNOLOGY - Preparation: (I) is prepared by standard **recombinant** techniques.

ACTIVITY - None given.

MECHANISM OF ACTION - None given.

USE - (I) can be used as a model for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human therapeutic agents that modulate **kinase** activity in cells and tissue that **express** the **kinase**. (I) can be used as a query sequence to perform a search against sequence databases to, identify other family members or related sequences. (I) is used to raise **antibodies** or to elicit another immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, and as markers for tissues in which the corresponding protein is preferentially **expressed**. The **kinase** proteins isolated from humans and their human/mammalian orthologs serve as targets for identifying agents for use in mammalian therapeutic applications, and biological assays related to **kinase** proteins that are related to members of the **serine/threonine** subfamily. The proteins can also be used in screening assays to screen a compound for

its ability to stimulate or inhibit interaction between **kinase** protein and a molecule that normally interacts with the **kinase** protein. The proteins also provide a target for diagnosing a disease or predisposition to disease mediated by the peptide, and in pharmacogenomic analysis. The peptides are also useful for treating a disorder characterized by absence of, inappropriate or unwanted **expression** of the protein. The proteins are useful in drug screening assays; end point assays to identify compounds that modulate **kinase** activity; in competition binding assays in methods designed to discover compounds that interact with the **kinase**; as a target for diagnosing active protein activity, disease or predisposition to disease in a patient with the variant peptide, particularly activities and conditions that are known for other members of the **serine/threonine kinase** subfamily proteins.

ADMINISTRATION - No details given.

EXAMPLE - No preparative example given. (82 pages)

AB The invention provides protein, cDNA and genomic sequences for a novel human protein **kinase** related to **serine/threonine kinase**. Specifically, a virtual northern blot shows **serine/threonine kinase** gene **expression** in brain (neuroblastoma), lung (small cell carcinoma), muscle (rhabdomyosarcoma), lymph (Burkitt lymphoma), ovary tumor, placenta (normal and choriocarcinoma), colon (normal, adenocarcinoma, and colon tumor), kidney (renal cell adenocarcinoma), breast, cervix (carcinoma), uterus tumor, pancreas (pancreatic islet), a pooled colon/kidney/stomach sample, and a pooled pancreas/spleen sample. Twenty eight single

nucleotide polymorphism has been found on **serine/threonine kinase** gene that has been mapped to chromosome 11. The invention also relates to screening modulator of **serine/threonine kinase** and their uses in therapy. The invention further relates to methods, vector and hosts for **expression of serine/threonine kinase**

37. (previously presented) The antibody of claim 33, wherein the antibody is coupled to a detectable substance.
38. (previously presented) A composition comprising the antibody of claim 3 and a pharmaceutically acceptable carrier.
39. (previously presented) A composition comprising the antibody of claim 31 and a pharmaceutically acceptable carrier.
40. (previously presented) A composition comprising the antibody of claim 32 and a pharmaceutically acceptable carrier.
41. (previously presented) A composition comprising the antibody of claim 33 and a pharmaceutically acceptable carrier.
42. (previously presented) An isolated antibody fragment that selectively binds to a polypeptide, wherein the amino acid sequence of said polypeptide consists of SEQ ID NO:2, and wherein the antibody fragment comprises a fragment selected from the group consisting of:
- a) an Fab fragment;
 - b) an F(ab')₂ fragment; and
 - c) an Fv fragment.
43. (previously presented) An isolated antibody fragment that selectively binds to a polypeptide, wherein the amino acid sequence of said polypeptide comprises SEQ ID NO:2, and wherein the antibody fragment comprises a fragment selected from the group consisting of:
- a) an Fab fragment;
 - b) an F(ab')₂ fragment; and
 - c) an Fv fragment.
